LASER CORRECTION MANAGEMENT/GENERAL OPTOMETRY/  
INFECTIOUS, ALLERGIC EYE & LID DISEASE

Dear Patient,

We offer an Automated Perimeter to enhance the diagnostic services we provide. The sophisticated, computerized instrument allows us to map the peripheral vision in each eye, which is valuable in assisting in the early detection of many eye diseases such as glaucoma, optic neuritis, retinal detachments, macular degeneration and neurological lesions that can affect your vision in ways that you may not notice until the conditions have become severe. In some cases, a visual field mapping may be the only effective way of detecting these problems.

As your eye doctor I recommend a visual field exam for everyone especially if you have a history of diabetes, headaches, migraines, flashers or floaters, recent change in vision or a family member who has glaucoma or diabetes. The fee for this screening is \$12.00. If the screening exam detects any potential problems, we may require a more sophisticated diagnostic exam to more fully explore the levels of sensitivity in you field. This will help determine the extent of the field loss and the best course of treatment.

Please make an X in the appropriate line below and sign:

I would like a General Eye Exam with the Visual Field Screening.

I understand the importance of the Visual Field Screening and understand this exam would be in my best interest, but at this time I would like a General Eye Exam only without the Visual Field Screening.

Signature: \_\_\_\_\_ Date: \_\_\_\_\_

Please note that while the Visual Field Screening is "optional" for some patients, it represents preventive health care for others. It may be required to rule out certain eye diseases based on your history and clinical findings of your eye exam.
